Project Description

You are going to develop a multi-page website for a restaurant. The name and type of the restaurant is up to you. You can use an existing restaurant, or you can make up your own.

Every page of the website will need a header, content area, sidebar, and footer. Every page of the website should have the following information:

- Restaurant Name (header)
- Navigation (header)
- Hours of Operation (sidebar)
- Phone Number (sidebar)
- E-mail Address (sidebar)
- Address (footer)
- Link to Google Maps (footer)

The website will include the pages listed below. The content area for each page is also described for you.

Homepage

The homepage will include an image, one paragraph of introductory content (like a welcome message), and an unordered list of daily specials for every day of the week (Monday, Tuesday, Wednesday, etc.)

Menu

The menu page will include a table of menu items. Each table row should include a column for the menu item name and a column for the price. The menu page needs to include at least 4 categories of items (appetizers, entrees, etc.), and each category needs to include at least 4 menu items. That means you'll be creating four tables on this page, one for each menu item category.

Photo Gallery

The photo gallery page will include a grid of thumbnail photos. Each row will include 4 thumbnail photos. When you click on a thumbnail photo, a larger version of the photo should appear in lightbox format using Fancybox. The photo gallery page needs to include at least 16 photos.

Testimonials

The testimonials page will include customer testimonials. Each customer testimonial will be one sentence long. The customer name and photo must be included for each testimonial. The testimonials page needs to include at least 4 testimonials.

Contact

The contact page will include an inquiry form that can be filled out. Form fields will include:

- Name
- E-mail Address
- Phone Number
- Message

The contact form should submit to a script that will e-mail you when someone fills out the form.

Other Things

Bonus Criteria

- Embed Google Map on contact page.
- Switch out the pre-existing images of food and people for images that you prefer. You will need to resize the larger images in Photoshop to be no more than 1500px wide or 1500px tall. The thumbnail images will all need to be the same size (I recommend 300px x 300px for the thumbnails.)
- Replace the static homepage image with Slick carousel (<https://kenwheeler.github.io/slick/>) and add at least five banner images to the carousel. Look for the "You can also use slick with the jsDelivr CDN!" section on the website for the code needed to add Slick to your website.

You will need to incorporate Google Web Fonts, Fancybox, and Animate.css into your website.

You do NOT need to design a logo for the restaurant.

Grading

This project is not a design project. While you need to make your website look presentable with a color scheme, the grading focus of this project will be on:

- Using appropriate HTML tags for your content.
- Using CSS to style HTML content.
- Cleanliness and organization of HTML and CSS, especially code indentation.
- Making sure all of your internal links work.
- Making sure your Fancybox integration works.
- Making sure Google Web Fonts and Animate.css integration works.

Turning In Your Work

Your project must be e-mailed in ZIP format to bmsilverstein@utep.edu by the due date listed above. Late work will not be accepted. You will receive an e-mail confirmation from me when I receive your project files.
